Cable Management Technical

| Range | Technical Data |
|---|----------------|
| Perimeter and Distribution | |
| Cable Management Introduction | 610-611 |
| Prestige 3D Dado and Skirting Three compartment dado trunking system for compliance with Cat 6 structured cabling | 612-615 |
| Prestige 3D Antibac Blue Antibacterial solution for power and data distribution in environments where hygeine is priority | 616 |
| Prestige 3D Compact 3 compartment trunking with a smaller footprint for more confined installations | 617-621 |
| Prestige 2com Two compartments provide maximum data capacity around radiused bends | 623-629 |
| Prestige Poles and Posts Poles and Posts for supplying multi-services to work stations | 630-631 |
| Powerlink Plus Busbar trunking system with flush fitting accessories | 632-639 |
| Pinnacle Versatile angular bench trunking system | 640-644 |
| Premier Integrated trunking system with snap fit mouldings | 645-649 |
| Norwich Durable and popular trunking system | 650-654 |
| Ega Industrial Heavy duty trunking in a variety of sizes | 656-661 |
| Ega Cornice Trunking for wall/ceiling junctions | 662-666 |

Cable Management Technical

| Range | Technical Data |
|---|----------------|
| Conduit and Mini | |
| Egatube Conduit High impact conduit with a comprehensive range of fittings | 667-671 |
| Ega Mini Trunking and Red Alert Wide selection of mini trunking profiles and fittings | 672-674 |

Cable Management Technical

Material Specification

PVCu

PVCu is used for the production of extrusions and mouldings and is universally accepted as having the most suitable properties for use within the electrical industry.

Standards and Approvals

All MK PVCu products are manufactured in accordance with the requirements of BS EN 50085 Series, BS 4678: Part 4, BS EN 61386 Series and BS 4662. The PVCu material used has been tested by an approved laboratory in accordance with the requirements of the following British Standards: BS 4607: Part 1, BS 476: Part 7. Copies of test certificates are available upon request. MK has been awarded ISO 9001: 2008 accreditation. The system complies with all relevant requirements of BS 7671:2008.

CE marking

All relevant MK products in this brochure are CE marked, confirmation that they meet the EMC and LV directives.

Performance

| Strength | Impact resistance | under no | act resistance rmal climatic s, BS 4678: duty |
|----------|----------------------|------------|--|
| | Charpy notched impac | t strength | 25 kJ/m ² |
| | Tensile strength | at yield | 34.62 N/mm ² |

Fire performance

The PVC-U materials used in the manufacture of MK products are non-flame propagating in accordance with BS EN 61386, BS EN 50085 and BS 4678. Extrusion material has been tested by an accredited laboratory in accordance with the requirements of BS 476: Part 7 and has achieved a Class 1Y classification. Moulding material has been tested by an accredited laboratory and conforms with IEC 695-2-1 at a severity of 650°C.

Thermal properties

All MK PVCu products are designed to accommodate local thermal expansion. Fitting instructions explain the procedure required to deal with the differential movement at the interface with the building fabric.

| Coefficient of linear expansion | 55 x 10 ⁻⁶ /°C (5mm/3000mm with a temperature rise of 25°C) |
|---------------------------------|--|
| Operating temperatures | -5° to 60°C |
| Vicat softening point | 81°C |
| Thermal conductivity | 0.19w/mk |

Chemical resistance

PVCu is non-corrosive and not affected by sea water. It has excellent resistance to mineral acids, alkalis and detergents, good resistance to alcohols, but liable to attack from solvents such as keytones, aromatics and hydrocarbons.

Electrical

PVCu is non-conductive.

| Dielectric strength | 40 kV/mm in DBP |
|---------------------|--------------------|
| | 17 kV/mm in tx oil |
| Resistivity | 1014 Ω ohm |

Biologica

Resistant to vermin and termites.

Workability

All MK PVCu products are lightweight and can be readily cut and drilled with hand tools. Short component lengths can be readily incorporated, reducing wastage of material. All covers and accessories are manufactured to fine tolerances to ensure a tight fit with ease of removal. Stop ends are secured to the carriers. For details, see the relevant installation guide.

Durability

All MK PVCu products are stable and will maintain their performance characteristics in accordance with the terms and conditions described above.

Maintenance

Clip-on covers with optional screw fix and interchangeable accessories provide continuous accessibility for rewiring, extensions and modifications to an installation. Covers and accessories can be cleaned with a damp cloth and household detergent. The surface can be decorated with commercial paints if required

Mechanical performance

Impact resistance at -5°C, BS EN 50085: medium duty for trunking, BS EN 61386 heavy or medium, where relevant for conduits.

Aluminium

42.00 N/mm²

Standards and approvals

The Prestige 3D Aluminium System is manufactured in accordance with the requirements of BS EN 50085-1:2005 and BS EN 50085-2-1:2006. 1, 2 & 3 Gang Boxes conforming to BS 4662 where applicable.

IEE Wiring Regulations

All products are designed and manufactured to allow installation to comply with all relevant requirements of the latest edition of BS 7671:2008.

Quality Assurance

The system is manufactured to BS EN ISO 9001:2008

Earth Continuity

The system makes provision for earth bonding where required in accordance with BS 7671:2008.

When PVC cable trunking items are used that interrupt the earth continuity, Earth Kits (VP218 & VP219) are required to ensure continuity.

Impact Classification

Composite trunking systems (PVC / Al) will withstand "medium" impact to BS EN 50085. Metal components will withstand "heavy" impact as defined in BS EN 50085.

Thermal Properties

Min/Max installation and application temperature -5 to +60°C.

Coefficient of linear expansion 23 x 10-6 per°C.

1mm/m for 40 degree rise.

Maintenance

Resistant to staining. Wipe with soapy water (neutral 5/7 ph value).

Electrical Properties

Resistance to 0.03 ohm mm²/m.

Chemical Properties

Corrosion only occurs, to any extent, when ph value is less than 3 or greater than 9.

Cable Management Technical

CONCENTRATION UNPLASTICISED PVC

PVCu Chemical Resistance Table

CHEMICAL

The resistance of unplasticised PVC to a wide range of chemicals is listed in the table below.

The symbols used to denote performance are as follows:

▲ Satisfactory

- Some attack or absorption: the material may be considered for use when alternative materials are unsatisfactory and where limited life is acceptable. When PVC is to be used with such chemicals full scale trials under realistic conditions are necessary.
- Unsatisfactory: so rated because of decomposition, solution, swelling, loss of ductility etc, of the samples tested.

For clarification and for details of resistance to other chemicals please call our Technical Hotline on +44 (0)1268 563720.

Note: to determine the suitability of PVCu for external applications we strongly advise you contact the MK Technical Sales and Service Department on +44 (0)1268 563720.
